Aluminum Damper

5" Deep · 4" Airfoil Blade · Control Damper

STANDARD MATERIALS AND CONSTRUCTION

AND AND MATERIALO AND CONCINCION				
FRAME:	5" x .081" extruded aluminum, hat shaped			
BLADES:	4" x .081" extruded aluminum, single unit airfoil design, with			
	the pin-lock an integral section within the blade core			
AXLES:	1/2" dia. extruded aluminum, pin-lock design interlocking into			
	blade section			
BEARINGS:	Celcon			
LINKAGE:	Aluminum crank-arm permanently locked to have the blade			
	shaft by 2 stainless steel fasteners; Crank-arm contains a			
	1/2" dia. cadmium plated and chromate treated machined			
	steel trunnion riding in a cecon bearing; A plated steel 1/4-20			
	set screw with locking patch, ties the pivot to the 5/16" dia.			
	aluminum linkage rod; The linkage of each damper is			
	individually adjusted			
SEALS:	Extruded silicone rubber seal			
FINISH:	Mill			

ACTUATOR: 6" extended shaft; dampers more than one panel wide or high and operated with one actuator must be jackshafted; Factory supplied actuators are shipped loose to be mounted external as standard

OPTIONS

Hand Quadrants 120V, 24V, or Pneumatic Actuators Jackshafting Auxillary Switch Explosion Proof Housing

NOTES

1. "A" width and "B" height are opening dimensions. Dampers are provided approximately $\frac{1}{4}$ " undersize.

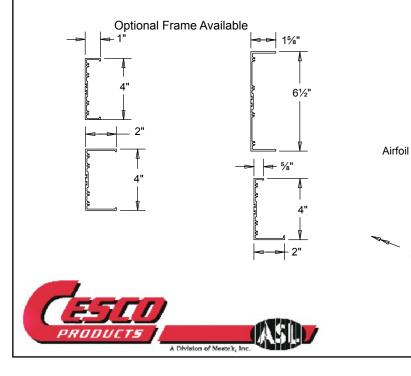

2. Dampers with multiple panels in both width and height may require structural support. It is recommended that large openings be designed with structural members so that dampers will span either width or height with a single panel. Cesco does not supply structural support with standard dampers.

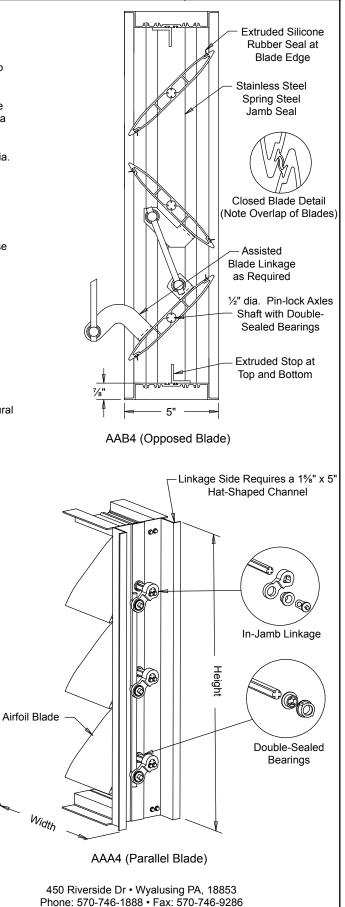

3. Not recommended for blades installed vertically.

4. Approximate damper weight is 5.5 lbs./sq.ft.

DAMPER SIZE

Panels	Minimum Panel	Maximum Panel
AAA4	12"W x 12"H	60"W x 72"H
AAB4	12"W x 14%"H	60"W x 72"H

Pressure Drop:

Pressure Drop Ratings are based on AMCA Standard 500 using test set-up Fig. 5.3 for damper installed with duct upstream and downstream. Static pressures are corrected to .075 lb./cu.ft. air density.

12"W x 12"H		24"W x 24"H

60"W x 36"H	1A	1		
Leakage Ratings are based on AMCA Standard 500 using				

Leakage

Leakage Ratings are based on AMCA Standard 500 using test set-up Fig. 5.5 at an operation temperature range between 50°F & 104°F. Data is based on a seating torque of 40 lb/in for dampers less than 4 sq.ft in size. Dampers above 4 sq.ft., 5 lb/in/sq.ft is applied to hold the damper in the closed position.

Linear Air Flow Characteristics

Cesco has tested a variety of airfoil blade widths 4", 5", and 6" in various arrangements from all parallel, all opposed, and combinations of parallel and opposed blades in a common frame for a single damper installed in a duct.

Test units were installed in ductwork with duct upstream and downstream per AMCA test set-up Fig. 5.3. Using most common approach velocities and fan static.

The results of the tests show that fan static pressure does have an effect on the linear air flow characteristics of a damper. Graphs below will identify the simulated system conditions used for the single damper in duct system application

Curves shown in the graphs below show that model AAB4 all opposed "as standardly built" is a very effective control damper for use in a variety of velocities and pressures.
