Notes

1. Nominal deductions will be made to the opening size given.
2. Dampers greater than or equal to 12" in height with factory mounted SM-501 smoke detectors require a minimum 19" deep sleeve (10½" on the actuator side). Detectors will be mounted on the side of the damper opposite actuator.
3. Dampers less than 12" in height with factory mounted SM-501 smoke detectors require a minimum 20" deep sleeve (11½" on the actuator side). Detectors will be mounted on the bottom or top of damper.
4. Smoke detectors can be ordered for field mounting with standard 18" deep sleeve.
5. Dampers for horizontal installation can only be mounted in a fire barrier constructed of masonry/concrete materials.

Operational Ratings

Maximum Differential Pressure: 4 in. wg (6 in. wg for selected size/actuators combinations)
 Maximum Velocity: 2000 fpm (4000 fpm for selected size/actuator combinations)

Leakage Ratings

UL Leakage Class I
 4 cfm per sq. ft. maximum @ 1 in. wg
 8 cfm per sq. ft. maximum @ 4 in. wg
 9.8 cfm per sq. ft. maximum @ 6 in. wg

Pressure Drop Ratings

The Pressure drop data shown below is based on laboratory conditions. The test setup does not take into account elbows or other duct fittings that are part of every actual duct system. The configuration of the actual duct system immediately upstream and downstream of the damper often contributes more pressure loss than the damper itself.

This product was tested in accordance with AMCA Standard 500D, Figure 5.3.

NOTES

- For dampers with no transition, the size to order will be frame size, which is equal to the size of the ductwork unless otherwise noted.
- For dampers with transition, the size to order will be as follows: width + 2" by height + 2"
- When the damper is 6" high, width is limited to 16". If the damper is ordered as 6" high and its width is less than 16", an 8" high damper with a 2" short-height transition will be supplied.
