Airline provides a wide range of louvers for any situation: architectural additions, vision screens, rooftop installations, and storm ready protection. Our people have the experience and knowledge to help you make the right decision.

AirlineLouvers.com

Our Paints

Airline offers a selection of thirty (30) solid stock colors and five (5) metallic stock finishes as seen on this color chart. We also offer color matching (minimum paint purchase required). Please contact our customer service team for more information.

For warranty information, please refer to the Paint System Warranty chart on the back of the brochure.

All of Airline's powder paints supports the Green Building Initiative & LEED.

AIRLINE 2604-02

Airline 2604-02 is our Standard Powder Coating designed for multi-purpose applications. This paint system meets the criteria of the AAMA 2604-02 specification. The Airline 2604-02 paint system has been successfully tested in South Florida outdoor conditions, achieving 3000 hours of sun exposure without failing. It is also rated for 3000 hours of salt spray performance, for projects in coastal and beach settings.

AIRLINE 2605-02

Airline 2605-02 is our High Performance Fluoropolymer Thermosetting Resin powder paint system with a significantly higher surface hardness, mar resistance, and abrasion resistance. The Airline 2605-02 is a dependable, specialized paint system that meets the stringent standards of AAMA 2605-02.

KYNAR 500®

Kynar 500® resin is a special grade PVDF resin used by Airline as a base resin in life-long coatings for aluminum and galvanized steel products. This coating is resistant to chalking and UV deterioration. Kynar 500® exceeds all the test requirements of the AAMA specification 2605-02 for high performance organic coatings on architectural aluminum extrusions and panels.

KYNAR XL

The Kynar XL uses our Kynar 500® paint system as a base line and then adds an extra clear coat. This superior coating is extremely resistant to chalking and UV deterioration. This coating exceeds all the test requirements of the AAMA specification 2605-02 for high performance organic coatings on architectural aluminum extrusions and panels.

ANNODIZING

This electrochemical process is designed to age the aluminum in a controlled environment, which can seal the surface of the aluminum and provide protection from the natural aging process. Arrow United provide anodizing as a clear process, or infused with special dyes including black and shades of bronze. These colors may vary based on the aluminum alloy used.
