

*The Original Small Duct  
Central Air Conditioning  
and Heating System*

## Central Air... Anywhere

SpacePak is the small duct, central air conditioning and heating solution for homes not conducive to traditional ducted systems. From classic Victorians and simple Capes to modern custom homes and new additions, SpacePak brings cooling and heating comfort while preserving the design and aesthetic integrity of your home.

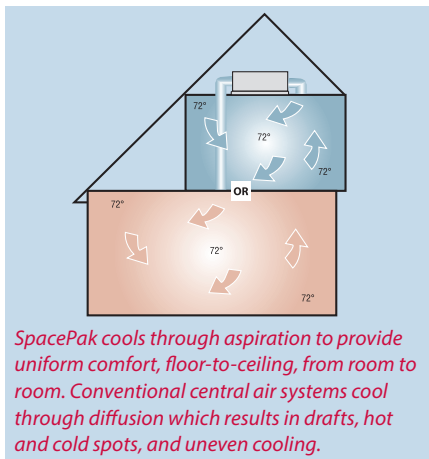

SpacePak is the original small duct air distribution system and has been successfully conditioning homes through its unique energy efficient process for over 40 years.

The many benefits of SpacePak include:

- Installation without major remodeling
- High efficiency cooling while removing 30% more humidity
- Whisper quiet operation
- Space-saving aesthetically pleasing installation
- Application flexibility – install outlets virtually anywhere

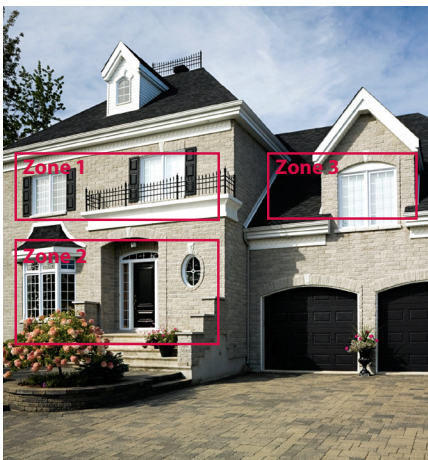

## Draft-free Cooling/Heating From Floor to Ceiling

SpacePak pioneered and perfected the concept of 'aspiration', utilizing a high velocity air stream to gently mix with the air in the room for uniform, draft-free conditioning. Hot and cold spots as well as annoying drafts, common with conventionally ducted systems and window air conditioning units are virtually eliminated. Rooms stay a comfortable, uniform temperature no matter what the season.

## ZonePak Comfort Where You Want It

Most traditional air systems cannot be effectively zoned for personal comfort. Zonepak allows for custom control of your SpacePak system by delivering tempered air to only the spaces you choose. Conserve energy and save money with Spacepak's custom zoning control package, capable of running up to 3 separate zones to maximize operating efficiencies.

## SpacePak Provides Cool, Dry Air

During cooling season, nothing is more uncomfortable than hot, humid, sticky air. The SpacePak system features an exclusive deep coil design that removes up to 30% more moisture from the air than conventional central air systems. The result is a much lower humidity level that helps you feel cool and comfortable at a higher, more energy efficient thermostat setting.

## PurePak Recessed Air Cleaner

PurePak system air cleaners allow you to breathe clean and healthy year round. PurePak removes up to 97% of airborne particles including VOC's, mold, bacteria, allergens, smoke and pollen. PurePak's electrostatically charged filter is far superior to other air filtration systems.

*PurePak eliminates these harmful particles as well as other chemicals and VOCs from the air you breathe.*

## Preserve Architectural Integrity

Unlike conventional central air conditioning and heating systems that can require major renovations, SpacePak's flexible, pre-insulated 2" diameter tubing can be threaded through closets or between wall studs or ceiling joists with minimal disruption to the living space and no major remodeling. The whisper-quiet system is run by a blower unit small enough to fit inside an attic, basement, closet or crawlspace.

Inconspicuous air distribution outlets can be installed in ceilings, walls, soffits and floors throughout your home. SpacePak offers the widest selection of outlets to suit the most discriminating decorating tastes – from the classic look of finished aluminum and brass, to natural wood grain.

## Ideal for Retrofits and New, Custom Homes

With SpacePak's versatility it's no wonder that it is the preferred choice for both retrofit and new home construction. Retrofit installations are hassle-free, with no major construction. In new homes, SpacePak installation is even easier as the system is installed with the other rough-ins. Spacepak systems give you a total comfort solution; cooling, heating and general air filtration.

It's time to say goodbye to fans and unsightly, noisy window air conditioning units. Make your home a Spacepak home and put an end to hot, humid sleepless nights and enjoy the comforts only a small duct air distribution system can provide.
