# DESIGN FEATURES

Sterling DURA-VANE II finned tube heating combines the smooth-flowing lines of extruded aluminum linear grilles with rugged steel enclosure. It complements the linear treatment of contemporary architecture, while providing a draft-free, comfortable environment.

## ENCLOSURES

The cold rolled steel enclosures are available in 16 gauge as standard, with an option for 14 gauge. The enclosures and accessories are degreased and phosphatized and sealer coated. They are painted with a baked powder finish.

Dura-Vane II enclosures are typically provided with slip joints welded to the interior of the enclosure front skirt. Their use permits one enclosure to engage another in a firm and flush fit. Internal gussets are provided to further strengthen the enclosure.

All Sterling commercial hydronic products are made from recycled materials. Recycled material contents can be obtained from your local Sterling representative or by viewing the [www.sterlingheat.com](http://www.sterlingheat.com) website. Sterling is a participating member of USGBC-LEEDS.

## EXTRUDED ALUMINUM OUTLET GRILLES

The extruded aluminum outlet grille is provided with a clear anodized 204R1 finish. It features a unique “bull-nose” design that extends the extrusion over the top of the enclosure front skirt. It allows an extra measure of protection to help guard the painted enclosure from damage caused by incidental contact.

Forward sloping air discharge vanes direct the heated air toward the occupied areas. The outlets are 3/16" deep on 3/8" centers. The uninterrupted lineal flow of the “pencil-proof” vanes is maintained by the use of alignment pins installed between adjacent grilles. The aluminum grille is factory assembled to the enclosure front skirt.

## ELEMENTS

Sterling offers a wide variety of heating elements with aluminum fins on copper tube or steel fins on steel tube. All are available in a wide range of tube size, fin size, fin thickness and fin spacing to provide the desired heating output. The tubing is mechanically expanded to bond the fins securely for maximum heat transfer. Finally, Sterling’s element ratings are AHRI certified (where indicated).

## BACKPLATE

The mounting system assures a rugged, well-fitting, quiet-operating, fast and accurate installation.

All full backplates will be one piece construction, 20 gauge galvanized steel (18 gauge optional) with a die-formed mounting channel into which the enclosure shall self-locate and secure. Self-adhesive closed cell neoprene air seal gasket to be provided when requested to prevent dirt streaking (specify factory or field installed).

All partial backplates are to be machine roll formed, pre-painted, 20 gauge steel with formed mounting channel into which the enclosure shall self-locate and secure. 18 gauge partial backplates will be provided as galvanized finish. Self-adhesive closed cell neoprene air seal gasket to be provided when requested to prevent dirt streaking (specify factory or field installed).

## BRACKET HANGERS

All brackets and hangers are to be die-formed 14 gauge galvanized steel with channel type wiped edge construction for rigidity. Nickel-chromium plated ball bearings inserted into a nylon isolator insert are to be used in conjunction with an 18 gauge galvanized die-formed element support cradle to provide friction-free lateral movement during expansion and contraction. Brackets are to have pre-formed contour at the top allowing the bracket to interlock with the backplate channel. Brackets are to be self-locating in the vertical (height) position. Hangers are to provide for vertical element adjustment when pitch is required (steam). Water jobs will not require adjustable hangers. Full engagement enclosure locks are to be supplied with each bracket. Bracket locations are recommended to be 2'6" to 4'0" on center located not more than 12" in from ends of enclosure based on individual design applications.

## FINISH

Dura-Vane II enclosures and accessories are provided with a factory applied baked powder finish. Twelve standard colors are available, including three metallic colors at an additional cost. Custom colors can be formulated to match any décor.

# DURAVANE II ACCESSORIES

Overlapping Accessories (allow for wall-length variation when running corner-to-corner).

Dura-Vane II wall mounted enclosure accessories fit securely with no visible fasteners. All are flanged for rigidity, overlap the backplate and have bendable tabs at the bottom to secure the accessory to the enclosure.

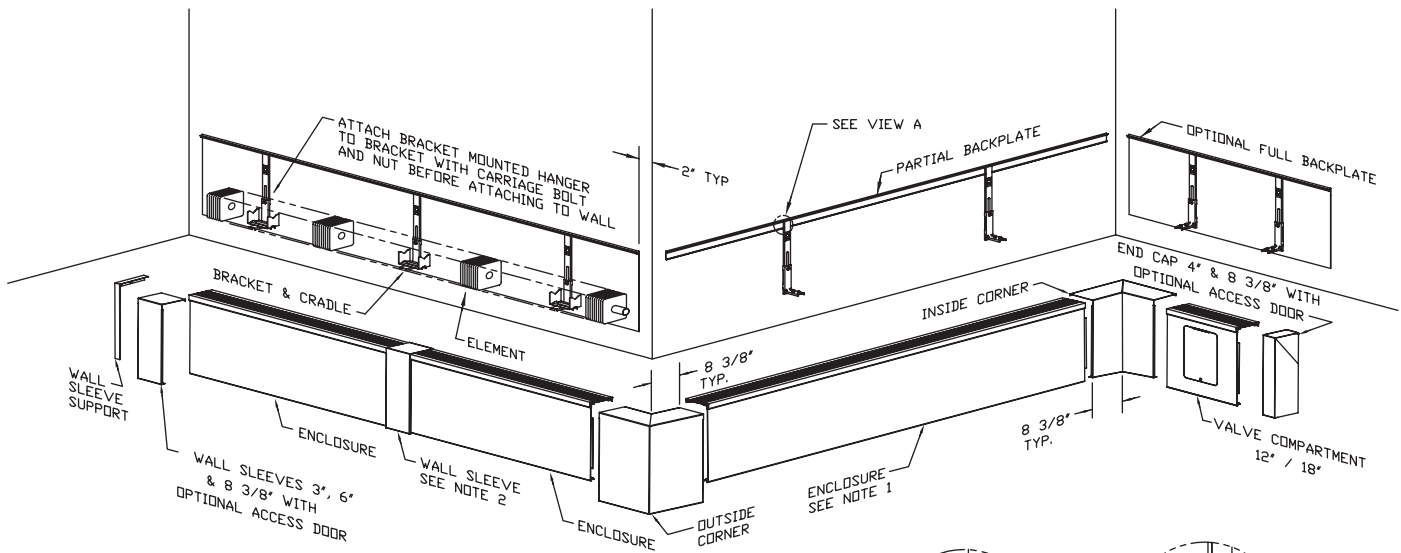

Dura-Vane II JDVA 10LI and JVDB 10LI wall mounted enclosure accessories fit securely and use visible bottom fasteners in lieu of tabs. All are flanged for rigidity and overlap the back plate.

Wall sleeves are intended to extend to the wall. End caps are placed at the end where the enclosure does not terminate at wall. Inside and outside corners have a solid top. Special angle corners (other than 90 and 135 degrees) are also available.

# DESIGN DATA

## COMMERCIAL FINNED TUBE CHARTS FOR RATING CORRECTIONS

Catalog finned tube ratings are based upon the following conditions:

- Steam ratings are based on .899 pounds of steam @ 215°F and 65°F entering air temperature at sea level.
- Water ratings shown are based on 3 Ft/sec. velocity and have been determined by applying correction factors developed by I=B=R to the steam ratings. For velocities less than 3 Ft/sec., see chart below for applicable correction factors.
- Ratings are based on active (finned) length. Steel element fins have black enamel finish.
- Ratings are based on mounting heights indicated in tables shown.

Use the following calculation with correction factors for job conditions to determine corrected rating:

$$\text{Corrected Rating} = (215^\circ\text{f Catalog Rating}) \times \left( \begin{array}{c} \text{Correction Factor For} \\ \text{Steam Or Water And} \\ \text{Average Air Temp.} \end{array} \right) \times \left( \begin{array}{c} \text{Correction Factor} \\ \text{For Flow Rate} \end{array} \right) \times \left( \begin{array}{c} \text{Correction For Mounting} \\ \text{Hgt. See Catalog Rating} \end{array} \right)$$

WATER VELOCITY (Ft./sec.)	IBR CORRECTION FACTOR
0.25	.905
0.50	.931
1.00	.957
1.50	.973
2.00	.984
2.50	.992

## DYNAMIC FORMULAS

$$BTU = GPM \times 500 \times TD$$

$$GPM = \left( \frac{BTU}{500} \right) \div TD$$

$$TD = \left( \frac{BTU}{500} \right) \div GPM$$

# SUGGESTED GENERAL SPECIFICATIONS

Furnish and install Dura-Vane II finned tube heating elements and enclosures as indicated on plans, together with required mounting components and accessories, all as manufactured by Sterling.

## HEATING ELEMENTS

All copper/aluminum heating elements shall be manufactured with seamless copper tubing mechanically expanded into the diameter of the equally spaced aluminum fins. The ends of the copper tube shall be furnished O.D. (male) and furnished I.D. (female, swaged) as to allow the use of standard domestic copper fittings.

All steel heating elements shall be manufactured with steel pressure tubing mechanically expanded into the diameter of the equally spaced steel (.024, .032) fins. The ends of the steel tube shall be threaded to accept all domestic NPT threaded fittings or cut square and chamfered for welding in field. All steel fins shall be pre-painted black with an enamel based black paint.

## BACKPLATE

All full backplates will be one piece construction, 20 gauge galvanized steel (18 gauge optional) with a die-formed mounting channel into which the enclosure shall self-locate and secure. Self-adhesive closed cell neoprene air seal gasket to be provided when requested to prevent dirt streaking (specify factory or field installed).

All partial backplates are to be machine roll formed, pre-painted, 20 gauge steel with formed mounting channel into which the enclosure shall self-locate and secure. 18 gauge partial backplates will be provided as galvanized finish. Self-adhesive closed cell neoprene air seal gasket to be provided when requested to prevent dirt streaking (specify factory or field installed).

## BRACKET HANGERS

All brackets and hangers are to be die-formed 14 gauge galvanized steel with channel type wiped edge construction for rigidity. Nickel-chromium plated ball bearings inserted into a nylon isolator insert are to be used in conjunction with an 18 gauge galvanized die-formed element support cradle to provide friction free lateral movement during expansion and contraction. Brackets are to have pre-formed contour at the top

allowing the bracket to interlock with the backplate channel. Brackets are to be self-locating in the vertical (height) position. Hangers are to provide for vertical element adjustment when pitch is required (steam). Water jobs will not require adjustable hangers. Full engagement enclosure locks are to be supplied with each bracket. Bracket locations are recommended to be 2'6" to 4'0" on center located not more than 12" in from ends of enclosure based on individual design applications.

## ENCLOSURE AND ACCESSORIES

Dura-Vane II Finned Tube Enclosures are to be of style and size as shown on plans. Material will be 16 gauge standard, 14 gauge optional, degreased and phosphatized and sealer coated cold rolled steel with a baked powder finish. Internally welded 14 gauge gussets shall occur at regular intervals to which the "pencil proof" clear anodized extruded aluminum grille will be affixed. The extruded aluminum grille is designed to engage the backplate at installation. All enclosures will be manufactured with male and female slip joints at opposing ends, providing positive engagement and alignment of adjoining enclosures at installation. The slip joints are to be of such design and form that they will provide vertical stiffening for the front skirt.

Accessories; with the exception of valve compartments; shall overlap the enclosure and fit securely with no visible fasteners. Wall sleeves shall be provided where enclosures extend to the wall. Ends shall be provided where the enclosure does not terminate at a wall. Inside and outside corners shall be furnished with no outlet grille.

## ACCESS DOORS

When indicated, access doors will be provided at mixer, shut-off or flow control valves. Doors will be 6" x 9" (or 5" x 6") and hinged at top. Access doors will be located in accessories or enclosure as noted on plans. Door latch head shall be of tamper resistant type.

## ENCLOSURES

Column enclosure kits shall be provided when piping is installed around columns. Vertical and horizontal pipe enclosures shall be provided to conceal risers and other connecting piping.
